Mountain Weather Forecast

Snowdonia National Park

Forecast valid from 06:00 on Saturday 15 May 2021 until 23:59 on Sunday 16 May 2021

Forecast Issued on Saturday 15 May 2021 at 00:44

Confidence: High for a very unsettled and showery weekend, with moderate confidence in the details of showers and their intensities. Moderate confidence that showers will become less heavy and frequent through next week, however it is likely to remain on the cool side for the time of year.

Headline for Saturday 15 May 2021: Cloudy with outbreaks of rain at first. Brightening up with scattered heavy and thundery showers developing, and brief bursts of sunshine in-between.

Mountain weather hazards on Saturday 15 May 2021

Heavy Rain	Light rain	Heavy rain showers	Heavy rain showers	Heavy rain showers	Light rain showers (night)
Precipitation probability					
60%	70%	40%	60%	60%	40%

Forecast for Saturday 15 May 2021

Weather: Overcast with outbreaks of rain at first, sometimes heavy. Skies will brighten later this morning but heavy showers will soon form. The rest of today will then be a mixture of heavy slow-moving thundery showers and brief sunny intervals. Some torrential downpours and hail are likely in places. The showers may become more isolated and lighter later this evening.

Chance of cloud free mountain/hill tops above 800m: 30% this morning rising to 60% from midday.

Visibility: A layer of cloud above 650-700m during the morning with ragged patches around 400m. This will give very poor visibilities on the higher level routes and make navigation challenging on unfamiliar terrain. Visibilities on the valley floor generally moderate to good but occasional reductions during periods of rain. Some improvement is likely around the middle of today as cloud bases lift to 800m or higher and become more broken. Most summits will intermittently clear of cloud this afternoon, however patches of cloud around 700m remains likely. Sudden reductions in visibility will occur in the showers and thunderstorms, with a chance of brief bursts of hail.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

It will be cold enough on the top of Snowdon for a little bit of sleet or wet snow at first this morning. From late morning showers may quickly form over the mountains, and there's a risk of thunder and lightning occurring without much notice.

Forecast for Sunday 16 May 2021

Weather: Starting largely cloudy with mainly light showers. During the morning bright or sunny intervals develop fairly quickly, while the showers become more widespread and increasingly heavy. The showers will be slow-moving with a risk of hail and thunder. Showers ease through the evening, become lighter and more isolated, as largely cloudy conditions develop.

Maximum wind: Generally no more than 10-15 mph from variable directions.

Chance of cloud free mountain/hill tops above 800m: 40% becoming 80% by midday, then decreasing 40% again through the evening.

Visibility: Locally poor visibilities during the overnight period and during the first part of the morning, also later in the evening, with periods of cloud above 700m and shreds of cloud down to 500m on some northeast facing hills. Improving to become generally very good by midday with broken layers of cloud above 900m but often above even the highest summits through the afternoon. Distant hills will be visible at times during the afternoon with excellent air clarity – however sudden deteriorations in visibility during showers and abruptly very poor in any bursts of hail.

Temperature: **Valleys:** Plus 6 Celsius rising to plus 15 Celsius
At 800m: Generally around plus 5 Celsius, briefly plus 8 Celsius mid-afternoon
Freezing level: Above the summits.
